What's new

Introduction

- A.1 Crop overview.....xxiii
 - A.1.1 The role of pulses in farming systems..... xxiii
 - A.1.2 About faba bean..... xxiv
 - A.1.3 Growing faba bean xxiv
 - A.1.4 Suitable environments..... xxviii
- A.2 Products and uses.....xxix
- A.3 Market.....xxix
- A.4 Faba bean researchxxx
- A.5 Keywordsxxxi

1 Planning/Paddock preparation

- 1.1 Paddock selection and ground preparation..... 1
 - 1.1.1 Avoid major variations in soil types.....1
 - 1.1.2 Avoid deep gilgai or heavily contoured country.....4
 - 1.1.3 Sticks, stones, clods of soil, ridged soil surface.....4
 - 1.1.4 Bunching and clumping of stubble.....5
 - 1.1.5 Disease and paddock selection.....5
- 1.2 Key requirements for faba beans 6
- 1.3 Paddock rotation and history.....7
- 1.4 Benefits of faba beans as a rotation crop.....7
 - 1.4.1 Pulses and cereals..... 7
 - 1.4.2 Disease management and nitrogen benefits 9
 - 1.4.3 Controlling cereal root disease 10
 - Crown rot*..... 10
 - 1.4.4 Quantifying break-crop yield increases 11
 - 1.4.5 Nitrogen fixation 12
 - Quantifying nitrogen fixation* 12
 - Nitrate-N benefit for following cereals*..... 13
- 1.5 Disadvantages of faba beans as a rotation crop.....14
- 1.6 Fallow management15
 - 1.6.1 Fallow weed management 15
 - 1.6.2 Fallow chemical plant-back effects 15
 - 1.6.3 Herbicide residues in soil 16

1.7 Seedbed requirements.....17
Rhizobia.....17

1.8 Soil moisture.....18
 1.8.1 Dryland..... 18
 1.8.2 Irrigation 18
 1.8.3 Seasonal outlook 18
HowWet?..... 19
 1.8.4 Weeds and paddock selection 20

1.9 Herbicide residues in soil21
Soil erosion.....21

1.10 Yield and targets21
 1.10.1 Yields..... 21
Ratio of water use to evaporation.....22
Temperature.....22
 1.10.2 Water Use Efficiency 24

1.11 Nematode status of the paddock.....24
 1.11.1 Nematode testing of soil..... 24
 1.11.2 Effects of cropping history on nematode status 25
 1.11.3 Faba beans and RLN..... 25

2 Pre-planting

2.1 Faba bean types 1

2.2 Choosing a variety 1

2.3 Varietal performance and ratings yield 2

2.4 Area of adaptation 2

2.5 Quality traits 3

2.6 Northern faba bean varieties 5
Cairo(b)5
Doza(b)
PBA Warda(b)
 2.6.1 Faba bean variety agronomic traits..... 8
 2.6.2 Faba bean variety seed availability 8

2.7 CropMate VarietyChooser 8

2.8 Seed quality..... 9
 2.8.1 Grower-kept sowing seed 10
 2.8.2 Safe storage of seed 10
 2.8.3 Handling bulk seed 11

2.9 Seed testing12
 2.9.1 Germination testing 12
 2.9.2 Vigour testing..... 12
 2.9.3 Accelerated ageing vigour test..... 12
 2.9.4 Conductivity vigour test..... 12

2.9.5 Cool germination and cold tests13

2.9.6 Tetrazolium test (TZ) as a vigour test13

2.9.7 Other13

2.9.8 Weed contamination testing13

2.9.9 Disease testing and major pathogens identified in seed tests14

2.10 Performing your own germination and vigour test.....14

3 Planting

3.1 Inoculation 1

3.1.1 When to inoculate 3

3.1.2 Inoculant types 4

3.1.3 Newer inoculation methods 6

3.1.4 In-furrow water injection 6

3.1.5 Granular inoculants..... 9

3.1.6 Inoculant and fungicide compatibility..... 9

3.1.7 Compatibility with trace elements 10

3.1.8 Inoculation checklist..... 10

3.1.9 Rating nodulation and nitrogen fixation (effectiveness) 11

3.1.10 Key for assessing nodulation in winter pulse crops 11

3.1.11 Storing inoculants13

3.1.12 Inoculum survival.....13

3.1.13 Applying inoculant.....13

3.2 Seed treatments14

3.3 Crop establishment.....14

3.3.1 Stubble retention.....14

3.3.2 Time of sowing17

3.4 Seeding rates20

3.4.1 Row spacing 23

3.4.2 Row spacing trial results 24

3.4.3 Sowing depth27

3.5 Irrigation.....29

3.5.1 Principles..... 29

3.5.2 'Faba Check' findings 30

3.6 Pulses and herbicide damage..... 32

3.7 Sowing and handling hints 32

Handling bulk seed 33

3.8 Seeding equipment..... 33

3.8.1 Seeder and tine comparisons34

4 Plant growth and physiology

4.1 Introduction 1

4.2 Key to growth stages..... 1

4.3 Crop development 6

 4.3.1 Flowering and fruit development..... 7

4.4 Growth and development12

 4.4.1 Emergence.....13

 Leaves..... 14

 Roots..... 15

 4.4.2 Stem and branches.....17

 Pollination 18

 Pollination trials..... 19

 Climatic requirements for flowering..... 21

 Tolerance to low temperature..... 24

 Flowering, podding and seed development..... 25

 4.4.3 Erectness..... 28

 Maturity..... 30

4.5 References and further reading.....32

5 Nutrition and fertiliser

5.1 Declining soil fertility 1

 5.1.1 Soil organic matter.....1

 5.1.2 Current situation..... 4

 5.1.3 Options for reversing the decline in soil organic matter 5

 Impact of fertiliser N inputs on soil 7

5.2 Crop removal rates7

 Balancing inputs.....7

 Nutrient budgeting.....9

5.3 Soil testing..... 9

 5.3.1 Types of soil test..... 10

5.4 Nutrition11

 Identifying nutrient deficiencies..... 11

 Nutrient types 11

 5.4.1 Balancing inputs 12

 5.4.2 Nutrient budgeting 12

 5.4.3 Detecting nutrient deficiencies 13

 5.4.4 Diagnosing nutrient disorders 15

 5.4.5 Nutrient toxicity..... 16

 5.4.6 Boron toxicity 16

 5.4.7 Manganese toxicity.....17

 Symptoms 17

 5.4.8 Aluminium toxicity 17

 Visual symptoms..... 17

5.5 Fertiliser18

 5.5.1 Overview 18

 5.5.2 Pulses and fertiliser toxicity 18

5.5.3 Nitrogen..... 19
Deficiency symptoms..... 19

5.5.4 Phosphorus..... 21
Deficiency symptoms..... 21

5.5.5 Potassium..... 22
Deficiency symptoms..... 22

5.5.6 Sulfur 25
Deficiency symptoms..... 25

5.5.7 Zinc 25
Deficiency symptoms..... 25
Pre-plant treatments..... 26
Seed treatments..... 26
Fertilisers applied at sowing..... 26
Foliar zinc sprays..... 26

5.5.8 Iron 29
Deficiency symptoms..... 29
Occurrence and treatment..... 30

5.5.9 Manganese 30
Deficiency symptoms..... 30
Occurrence and treatment..... 32

5.5.10 Copper 32
Deficiency symptoms..... 32

5.5.11 Molybdenum..... 33
Deficiency symptoms..... 33

5.5.12 Boron deficiency 33
Deficiency symptoms..... 33

5.6 Arbuscular mycorrhizae fungi..... 34
High AMF situations 35
Low AMF situations..... 35

5.7 Nutrition effects on following crop 35

5.7.1 Nitrogen..... 35
Benefits of nitrogen fixation..... 38

5.8 References..... 39

6 Weed control

6.1 Integrated weed management in faba bean..... 1
In-crop weed control 2
Herbicide resistance 2
Crop rotation..... 3
Good agronomic practice 3
Timely cultivation..... 3

6.2 Specific weed issues for faba beans 3

6.3 Herbicide performance 4

6.4 Herbicide damage in pulse crops 4

6.5 Planning your weed control strategy 5

6.6 Herbicides explained 5

 6.6.1 Residual v. non-residual..... 5

 6.6.2 Post-emergent and pre-emergent..... 5

6.7 Crop damage caused by herbicides 5

 6.7.1 Tolerance of faba bean varieties to herbicides..... 16

 6.7.2 Contamination of spray equipment.....17

 6.7.3 Spray drift..... 19

6.8 Legal considerations of pesticide use19

Registration20

Labels.....20

SDS20

Permits20

APVMA.....20

Always read the label.....20

6.9 Getting best results from herbicides20

6.10 Weed control requires a planned approach.....22

 6.10.1 Weed competition in faba beans 22

 6.10.2 Knockdown herbicides 22

 6.10.3 Pre-emergent herbicides 23

 6.10.4 Pre-sowing (IBS, incorporation by sowing) herbicides..... 23

 6.10.5 Post-sowing pre-emergent (PSPE) herbicides..... 25

 6.10.6 Post-emergent herbicides27

6.11 Post-emergent grass-weed control..... 27

 6.11.1 Mode of action..... 28

 6.11.2 Avoidance of stress conditions 28

 6.11.3 Grass-herbicide damage in faba beans 28

 6.11.4 Sulfonylurea residues in boom sprays 29

6.12 Other weed-control strategies..... 29

 6.12.1 Directed sprays in-crop 29

 6.12.2 Crop-topping 30

 6.12.3 Desiccation31

6.13 References and further reading.....31

7 Insect control

7.1 Key insect pests of faba bean 3

 7.1.1 *Helicoverpa* 3

Managing Helicoverpa in faba beans—an interim management strategy 4

Identifying Helicoverpa 4

Helicoverpa species composition can vary between seasons and regions.....6

Life-cycle and development of Helicoverpa.....6

 7.1.2 Aphids8

Identification..... 8

Cowpea aphid (Aphis craccivora)..... 9

Life-cycle..... 11

Direct feeding damage..... 12

Aphids as vectors of viruses..... 13

How aphids transmit viruses..... 14

7.2 Other insect pests..... 16

7.2.1 Green mirid (*Creontiades dilutus*)..... 16

Life-cycle..... 17

Damage..... 17

Monitoring and thresholds..... 18

Management..... 18

7.2.2 Cutworms (*Agrotis* spp.)..... 18

Identification..... 18

Damage..... 18

Monitoring and thresholds..... 19

Management..... 19

7.2.3 Thrips..... 20

Damage..... 20

Monitoring and thresholds..... 20

7.2.4 Loopers..... 22

Identification..... 23

Damage..... 23

Monitoring and thresholds..... 23

Management..... 23

7.2.5 Beet armyworm..... 23

Identification..... 23

Life-cycle..... 24

Damage..... 24

7.2.6 Slugs..... 24

Identification..... 24

Life-cycle..... 25

Damage..... 25

Monitoring and thresholds..... 26

Management..... 26

7.3 Identification resources are useful for checking whether insects are friend or foe..... 27

7.3.1 Insect ID: The Ute Guide..... 27

7.3.2 The Good Bug, Bad Bug book..... 28

7.3.3 I SPY manual..... 28

7.4 The pest management process..... 28

7.4.1 Planning..... 29

7.4.2 Monitoring..... 29

7.4.3 Correct identification of insect species..... 30

7.4.4 Assessing management options..... 30

7.4.5	Control	30
7.4.6	Re-assess and document results	30
7.5	Monitoring faba bean for insect pests	31
7.5.1	Sampling strategy and technique	32
	<i>How to use a beat sheet</i>	<i>34</i>
	<i>How to use the beat sheet to sample faba beans</i>	<i>35</i>
	<i>How to use a sweep net to sample faba beans</i>	<i>35</i>
	<i>Recording monitoring data for decision-making</i>	<i>36</i>
7.5.2	What to be aware of when sampling for <i>Helicoverpa</i>	36
	<i>Eggs and very small larvae</i>	<i>36</i>
	<i>Small, medium and large larvae</i>	<i>37</i>
7.5.3	<i>Helicoverpa</i> damage in faba beans	37
	<i>Flowers and buds</i>	<i>37</i>
	<i>Pods and grain damage</i>	<i>38</i>
7.5.4	Defective grain and the contribution of <i>Helicoverpa</i>	39
7.5.5	Thresholds	39
	<i>Yield and quality thresholds</i>	<i>40</i>
7.5.6	Other considerations when making control decisions based on <i>Helicoverpa</i> larval densities are:	40
7.5.7	Control options for <i>Helicoverpa</i> in faba beans	41
	<i>Resistance management strategies</i>	<i>41</i>
	<i>Spray smart</i>	<i>42</i>
7.6	Legal considerations for pesticide use	43
7.7	Registration	43
	<i>Labels</i>	<i>44</i>
	<i>MSDS</i>	<i>44</i>
	<i>Permits</i>	<i>44</i>
	<i>APVMA</i>	<i>44</i>
	<i>Always read the label</i>	<i>44</i>
	<i>PestGenie</i>	<i>44</i>
7.8	References and further reading	44
8	Nematode management	
8.1	Background	1
8.1.1	<i>Pratylenchus thornei</i>	<i>2</i>
8.1.2	Other nematodes in the northern grain region	3
8.2	Symptoms and detection	4
8.3	Management	5
	<i>Testing for RLN</i>	<i>5</i>
8.3.1	Resistance versus tolerance	7
	<i>Resistance: nematode multiplication</i>	<i>7</i>
	<i>Tolerance: crop response</i>	<i>7</i>
	<i>Paddock hygiene</i>	<i>9</i>
8.4	Damage caused by pest	9

8.4.1 How do faba beans compare with other crops for build-up of *Pratylenchus thornei*? 10

8.5 References.....13

9 Diseases

9.1 Fungal disease management strategies..... 1

9.2 Integrated pest management 3

9.3 Key criteria and considerations 4

 9.3.1 Risk assessment..... 4

 9.3.2 Steps in risk assessment..... 5

 9.3.3 Paddock selection 6

 9.3.4 Variety selection 6

 9.3.5 Seed quality and treatment 8

 9.3.6 On-farm and off-farm hygiene 8

 9.3.7 Regular crop monitoring..... 9

Cercospora..... 10

 9.3.8 Foliar fungicides 10

9.4 Fungal disease control11

 9.4.1 Principles of fungicide use 11

 9.4.2 When to spray 12

 9.4.3 Principles of spraying..... 12

9.5 Registered fungicides.....13

9.6 Summary of a foliar fungicide strategy13

9.7 Legal considerations of pesticide use.....18

9.8 Symptom sorter19

9.9 Rust22

 9.9.1 Symptoms 22

 9.9.2 Economic impact..... 24

 9.9.3 Disease cycle 24

 9.9.4 Control 24

9.10 Chocolate spot.....25

 9.10.1 Symptoms 25

 9.10.2 Economic importance 32

 9.10.3 Disease cycle 33

 9.10.4 Control 33

 9.10.5 Chocolate spot management options..... 33

9.11 *Ascochyta* blight.....35

 9.11.1 Symptoms 35

 9.11.2 Economic importance41

 9.11.3 Disease cycle41

 9.11.4 Control41

9.11.5 *Ascochyta* management options 41

9.12 *Sclerotinia* stem rot..... 42

9.12.1 Symptoms 42

9.12.2 Economic importance 42

9.12.3 Disease cycle 43

9.12.4 Control 43

9.13 *Aphanomyces* root rot..... 43

9.13.1 Symptoms 43

9.13.2 Economic importance 43

9.13.3 Disease cycle 43

9.13.4 Control 43

9.14 *Botrytis* grey mould (BGM) 43

9.14.1 Background 43

9.14.2 Economic importance 44

9.14.3 Biology and epidemiology..... 44

9.15 Root rots, including *Phoma* blight and damping off 44

9.15.1 Symptoms 44

9.15.2 Economic importance 44

9.15.3 Disease cycle 45

9.15.4 Management options 45

9.16 Viruses..... 45

9.16.1 Virus types 46

9.16.2 Symptoms 47

9.16.3 Economic importance 57

9.16.4 Disease cycle 57

9.16.5 Control 58

9.17 Root-lesion nematodes (RLN) 59

What is resistance and tolerance?..... 60

9.17.1 Symptoms 60

9.17.2 Yield losses..... 60

9.17.3 Symptoms 60

9.17.4 Economic importance 60

9.17.5 Disease cycle 61

9.17.6 Management options 61

9.18 Improving diagnostic skills 61

9.18.1 Key diagnostic principles 61

9.18.2 Practical tips 61

9.19 Sample preparation for diseased plant specimens 62

9.19.1 Selection of specimens 62

9.19.2 Preservation 62

9.19.3 Packaging..... 63

9.19.4 Labelling 63

9.19.5 Dispatch..... 63

10 Plant growth regulators and canopy management

11 Crop desiccation/spray out

11.1 Desiccation 1

11.2 Crop-topping 2

11.3 Seed and pod development..... 2

11.4 Timing of desiccation 2

 11.4.1 Effect of desiccants on green immature seeds 3

 11.4.2 Products registered for the desiccation of faba bean..... 4

11.5 Windrowing 4

12 Harvest

12.1 Impact of delayed harvest on profitability 1

 12.1.1 Yield losses..... 1

 12.1.2 Deterioration in grain quality..... 2

 12.1.3 Missed marketing opportunities..... 3

12.2 Implementing early harvest management..... 3

12.3 Harvesting and header settings 4

12.4 Modifications and harvest aids..... 5

12.5 Achieving a clean sample..... 9

 12.5.1 Rolling for harvest efficiency..... 9

 12.5.2 Perforated screens 9

 12.5.3 Harvester speed..... 9

 12.5.4 Harvesting in high humidity..... 9

 12.5.5 Pick-up fronts 9

 12.5.6 Flexible cutter-bar fronts (flexi-fronts) 10

12.6 Lodged crops 10

12.7 Assessing grain harvest losses..... 10

12.8 Handling faba beans..... 11

12.9 Grain cleaning..... 12

12.10 Grain quality 12

12.11 References and further reading..... 14

13 Storage

13.1 Handling faba and broad bean..... 1

13.2 Grain cleaning..... 2

13.3 Grain quality..... 2

13.4 Grain storage principles..... 2

Cooling grain and aeration cooling 3

13.4.1 Preventing moisture migration 3

13.4.2 Drying grain and aeration drying 4

13.5 Insect pests in storage 4

13.6 Farm and grain hygiene 5

13.7 Fumigation..... 5

 13.7.1 Testing silos for seal..... 10

13.8 Silo or grain bags10

 13.8.1 Pulse quality risks and grain bags..... 11
