

Personalised Cropping Decisions Workshop

Preparation, Management and Recovery from Drought

Drought is an enduring feature of the Australian landscape. It has significant economic, social, and environmental impacts.

The "Personalised Cropping Decisions" workshop, as part of the *Future Drought Fund – Innovation Grant*, provides you with the opportunity to gain knowledge and tools to enhance your operational capacity in managing drought. Through a guided self-learning process to develop personalised cropping decisions and hands-on training with drought management tools such as [CropARM](#) and [RotationARM](#), participants will be able to:

- Identify tactical crop management decisions that improve resilience during drought exposure
- Compare strategic choices between different crop rotations to increase drought resilience as part of pre-season planning
- Develop personal learnings and rules-of-thumb (improve drought resilience)
- Understand how to improve drought resilience into the future (continued improvement)
